DocMan Alert

User Manual

A plain-language guide to everyday tasks: documents, licenses, checkups, and alerts.

Document date 8 October 2026

Audience All DocMan Alert users

Classification Internal

1. Welcome

DocMan Alert keeps track of your factory's compliance documents, employee licenses, and health checkups, and emails the right person before something expires. This guide walks through the everyday screens in plain language — no technical background needed.

The pictures in this guide are simplified sketches of each screen, not exact screenshots — they show you what to expect, even though the real page may look slightly different.

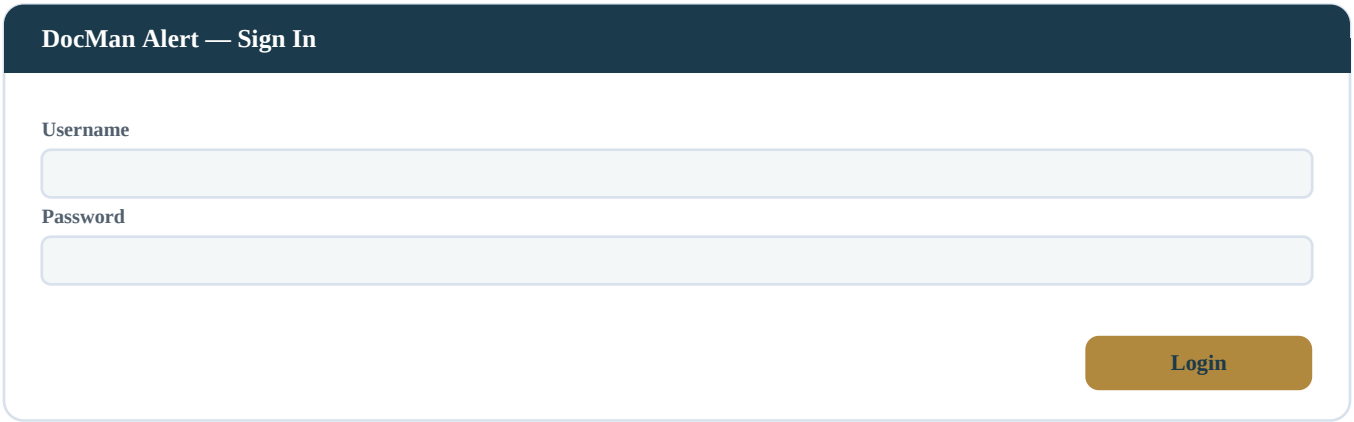
In this guide:

- Logging in and finding your way around.
- Adding, renewing, and sending alerts for documents.
- Tracking employee licenses and health checkups.
- Understanding what the status colours and alert emails mean.
- Administrator tasks — users, backups, and settings (marked clearly, for admins only).
- Answers to common questions.

2. Logging In

Open the web address your ICT team gave you. You'll see the sign-in screen below.

1. Type your Username.
2. Type your Password.
3. Click **Login**.



Note: Five wrong passwords in a row lock your account for 10 minutes. Just wait and try again — no need to call ICT unless it keeps happening.

Tip: Forgotten password? Ask your Factory Admin or ICT to reset it for you.

What you see after logging in — which factories, and which buttons — depends on your role. Here's what each role can generally do:

Your role	What you can do
Super Admin	Everything — all factories, all users, backups, and settings.
Administration	Manage companies, departments, and documents for every factory (not backups or system logs).

Your role	What you can do
Factory Admin	Manage users and records for your own factory.
Compliance Manager	Add, edit, and archive records for your own factory.
Compliance User	Add and edit records for your own factory (can't archive or delete).
Compliance Viewer	Look at everything, everywhere — can't make changes.
Transport Manager / User	Same as Compliance Manager / User, for the Transport side of the business.

If a page or a factory is missing from your menu, that's simply outside your role — ask your Factory Admin if you believe it shouldn't be.

3. The Dashboard

This is the first page you see after logging in. It's a quick summary of where things stand.

- Factory Documents and Employee Compliance — counted side by side, by status.
- Factory-wise Status — a table comparing every factory you can see.
- Needs Attention — a short list of the most urgent records; click one to open it directly.

> **Tip:** Colours are consistent everywhere in the system: green means Valid, amber means expiring soon, red means urgent or already expired.

4. Working with Documents

The Documents page lists every compliance document for the factories you can see. Use the search box and the Factory, Department, Status, Document Type, and date filters at the top to find one quickly.

4.1 Adding a new document

1. On the Documents page, click **+ Add Document** (only visible if your role allows it).
2. Choose the Factory and Department.
3. Enter the Document Name and Document Type (for example, “Fire License”).
4. Enter the Certificate / License Number, if there is one.
5. Enter the Issue Date and Expiry Date — or tick **No expiry** if it never expires.
6. Fill in the Issuing Authority and Responsible Person.
7. Attach the file — PDF, JPG, PNG, DOCX, or XLSX, up to 10 MB.
8. Optionally tick extra people who should also be emailed about this document.
9. Click **Save**.

4.2 Let the system fill the form for you

Instead of typing everything by hand, you can let DocMan Alert read the file and suggest the details.

1. On the Add Document page, scroll to **Extract Data from Document**.
2. Choose a PDF, JPG, or PNG file and click **Extract Data from Document**.
3. Review the suggested name, dates, certificate number, and authority on the confirmation page — correct anything that's wrong.
4. Click **Confirm** to save it as a document, or **Cancel** to discard it.

> **Note:** Nothing is saved until you confirm, and the suggestions are only a starting point — always check them, especially if the page shows a low-confidence warning.

4.3 Renewing an expiring document

1. Open the document and click **Renew**.
2. Enter the new Issue Date, Expiry Date, and Certificate Number.
3. Attach the new file.
4. Click **Create New Version**.

The old file isn't deleted — it stays on the document as a previous version, so you can always look back at it.

4.4 Viewing, archiving, and deleting

- **View / download** — open the document and click the file name to view or download it.
- **Archive** — hides the document from the active list but keeps everything; it can be restored later.
- **Permanently delete** — only for Managers and Admins. You must type the exact document name to confirm, and this cannot be undone.

4.5 Sending a one-off alert email

The system already emails the right people automatically as a document gets close to expiry (see Section 6). If you want to notify someone right now — for example, to chase a renewal — use Send Alert instead.

1. Open the document and click **Send Alert**.
2. Tick the people and group mailboxes who should receive it.
3. Click **Send this alert**.

> **Note:** Sending a manual alert does not cancel the automatic one — it's an extra message, not a replacement.

5. Employee Compliance

This section works the same way as Documents, but for people: their licenses (for example, a driving or operating license) and health checkups.

5.1 Adding an employee

1. Go to Employee Compliance and click **Add Employee**.
2. Enter the Employee Code, Name, Designation, and Section.
3. Choose the Factory and Department.
4. Enter an Email if the employee has one, and tick **Receive Alerts** if they should be emailed about their own licenses.
5. Enter the Date of Joining and whether the employee is Active.
6. Click **Save**.

5.2 Adding a license or health checkup

Open the employee's record, then add a License or a Health Checkup the same way you'd add a document — type, dates, and an optional file. Auto-Extract works here too, to save typing.

5.3 Importing many employees at once (Super Admin)

1. Go to Employee Compliance → Import.
2. Choose the Import Type — Employees, Licenses, Health Checkups, Alert Recipients, or a full workbook with all of them.
3. Choose your prepared .xlsx file and click **Upload & Preview**.
4. Check the preview — rows with unknown companies, factories, departments, or users are flagged and skipped.
5. Confirm to save the accepted rows.

6. Staying on Top of Alerts

6.1 What the status labels mean

Status	What it means	What happens
Valid	More than 90 days left, or no expiry date	No email.
Expiring in 90 / 60 / 30 Days	90, 60, or 30 days left	One reminder email every Saturday morning while it's in this range.

Status	What it means	What happens
Expiring in 7 Days	A week or less left	An urgent email every morning until it's renewed.
Expired	Past the expiry date	An urgent email every morning until it's renewed.

6.2 My Alerts

A personal page listing every record that could email you, and exactly why — because you're the assigned person, you uploaded it, or you're on your department's or company's standing list.

6.3 Alert History

Every email the system has sent or tried to send, successful or not, scoped to the factories you can see.

> **Tip:** Didn't get an email you expected? Check Alert History first — it shows exactly who the system tried to reach and whether it worked, before you assume something's broken.

7. For Administrators

The tasks below are only visible to Super Admin, Administration, and Factory Admin accounts.

7.1 Companies, Factories & Departments

Set up the organisations the system tracks. A Company contains Factories; Factories and Departments are both assigned when you add a document or employee record, so set these up first on a new site. Each Company, Factory, and Department can have its own standing Alert Recipients.

7.2 Users

1. Go to Users and click **Add User**.
2. Enter a username, full name, and email.
3. Choose a Role and, unless the role is factory-wide (Super Admin, Administration, Compliance Viewer), a Factory.
4. Click **Save**. Share the password with the new user directly — it isn't emailed automatically.

To remove a user, open their record and use Delete; you'll need to type their exact username to confirm. Their past documents and alerts stay on record — only their account is removed.

7.3 Regulatory Directory

A Super Admin-managed list of government offices and services (Category → Authority → Service), which Super Admin and Administration can optionally link a document to.

7.4 Backups

Click **Create backup now** to zip the database and every uploaded file on demand. The same backup runs automatically every evening; download any past backup from the list below the button.

7.5 Test Alert

Sends a sample email to the ICT team's own test addresses only — never to real recipients — so you can confirm mail delivery is working.

7.6 System Logs

A technical history of events — logins, scheduled jobs, backups, mail successes and failures. Useful for ICT troubleshooting; it is not a record of who changed what in a document.

8. Frequently Asked Questions

I can't see a factory's documents.
Your account is scoped to a different factory. Ask your Factory Admin or Super Admin if you believe you should have access.

I didn't get an email I was expecting.
Check your spam folder, then check Alert History — it shows exactly who the system tried to email and whether it succeeded. If you're not listed as a recipient, ask an admin to add you under the document, department, or company.

I entered the wrong date or detail.
Just open the record, edit it, and save again — the status and future alerts update automatically.

Can I undo a delete?
An archived record can be restored. A permanently deleted one cannot — that's exactly why it asks you to type the name to confirm.

Why did I get logged out?
A session ends when you close your browser or click Logout. There's no automatic timeout while you're actively using the system.

Do I need to click anything for the weekly or urgent reminder emails to go out?
No — those are fully automatic, based on each record's expiry date. Send Alert is only for an extra, one-off message.

9. Quick Reference

Automatic emails	When
Weekly reminder (90 / 60 / 30 days left)	Every Saturday morning
Urgent reminder (7 days left, or expired)	Every morning, until renewed

Need help? Contact your Factory Admin for day-to-day access questions, or your ICT team for anything technical — a locked account that won't unlock, a missing email after checking Alert History, or a page that won't load.
